Hydrogen evolution reactions are always accompanied by the electrochemical desulfurization process. Although mass transport leads to greater reaction rates, the large number of gas bubbles formed, resulting from the increased reaction rate, can adversely hinder the contact between the electrodes and the electrolyte. Therefore, it is necessary to control the bubble formation in the membrane ...

Gout. Mammals use uric acid crystals as an antioxidant in their cells. However, too much uric acid tends to form kidney stones and may also cause a painful condition called gout, where uric acid crystals accumulate in the joints, as illustrated in Figure 22.14.Food choices that reduce the amount of nitrogenous bases in the diet help reduce the risk of gout.
