The plague started in China and made its way west across Asia to the Black Sea by 1347. One theory is that a group of infected Tartars besieged a Genoese outpost on the coast. To harass the trapped townspeople, the Tartars used their catapults to hurl the dead bodies of their comrades over the town walls spreading the epidemic among the Genoese. The panicked inhabitants fled the scene by ship ...

After this first onslaught, the plague remained endemic for the next 300 years, returning every so often to cull the population. While epidemics such as the Black Death were dramatic in their devastation, medieval life was accompanied by the constant fear of death. Even without the plague, the average life expectancy for women was about 29 years and for men, only 28. In such harsh times, the ...
